

Project Initialization and Planning Phase

Date	12 JULY 2026
Team ID	N/A - Individual Submission
Project Title	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Project Overview	
Objective	Provide an AI-assisted debt recovery workspace where borrowers can track loans, understand financial health, estimate settlement offers and generate lender negotiation letters.
Scope	Includes authentication, financial dashboard, loan management, settlement prediction, AI-style letter generation, saved history, REST APIs, SQLite persistence and Docker deployment.
Problem Statement	
Description	Debt relief decisions are often made with incomplete numbers and emotionally difficult communication. The platform reduces uncertainty by combining borrower financial inputs with transparent scoring and practical negotiation support.
Impact	Solving these issues will result in improved operational efficiency, reduced risks, and an overall enhancement in the lending process, contributing to customer satisfaction and organizational success.
Proposed Solution	
Dashboard	Collect income, expenses, savings, total debt and minimum payments to calculate a financial health score.
Settlement	Use balance, overdue days, interest rate and disposable income to estimate a settlement range and strategy

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Communication	Generate a formal hardship and settlement request letter from borrower and creditor details.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	T4 GPU
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	1 TB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	IDE	Jupyter Notebook, pycharm
Data		
Data	Source, size, format	Kaggle dataset, 614, csv UCI dataset, 690, csv
