

Technology Stack

Date	12 JULY 2026
Team ID	N/A - Individual Submission
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side <i>(e.g., React, Angular, HTML/CSS)</i>	React, Vite, CSS	Fast component-based UI with a responsive dashboard and form-driven workflows

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	Python 3.11, FastAPI	Clean REST API development, automatic docs and high productivity for AI-style logic
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	SQLite, SQLAlchemy	Simple local persistence with typed models suitable for demo and easy migration later.
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	Docker, Docker Compose	Packages frontend and backend for repeatable execution

5	Version Control & CI/CD	Git	Tracks code changes and prepares the project for GitHub submission
	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools	AI	Implements financial health, settlement prediction and letter generation rules transparently.
	<i>(e.g., Stripe, Twilio, Google Maps)</i>
